

Automating Electronic Referrals to Scheduled Appointments

Challenge: Implement an emerging technology API system to automate the electronic referral to scheduled appointment process

Success Factors

Best Practice | Knowledge | Experience. Applying years of experience with large scale technical healthcare system implementations, the Ballista project manager developed and executed a strategy to configure, test and implement a successful pilot.

Approach

Guided both the client and start-up to determine scope of pilot; decide target use case; and mitigate all challenges during the execution of implementing a new technology.

Outcomes

Despite numerous hurdles the pilot met requested timelines, stakeholders felt informed and patient satisfaction is extremely high. A successful pilot resulted in adding new clinics and languages.

1830% increase in on-line scheduling across 4 (four) pilot clinics in a large academic organization

0 (zero) errors in scheduling during first 3 months of pilot period

54% reduction in patient wait time for scheduled appointment equaling a savings of **130 FTE hours**
