Pharmacy Inventory Management System Implementation

Challenge: Implement an emerging technology pharmacy inventory management system as an alpha partner for multiple academic medical centers

Success Factors

Best Practice | Knowledge | Experience. Applying years of vendor experience with large scale system implementations, Ballista project managers developed and executed a strategy to configure, test and implement a complex pharmacy inventory management system.

Approach

Developed scalable process to configure system. Led deployment & construction for inventory carousels to manage drugs. Established interfaces to multiple EHRs.

Outcomes

Successful implementations with minimal issues at three major academic medical centers and a regional level-one trauma center.

340b splitting software resulted in estimated drug savings of **$172.9M** the first year

Centralized inventory across the enterprise; **3** medical centers and **3** satellite pharmacies

Built & deployed drugs/NDCs for **100's of thousand** drugs/combos to manage entire formulary
